JACK BROOKES

Mechanical Engineering Graduate & Psychology PhD Student

EMAIL: ed11jb@leeds.ac.uk | jbrookes187@gmail.com

∴ PROFILE

I am a versatile, hard-working and motivated PhD student at the University of Leeds with strong multidisciplinary skills. I graduated with a 1st class in MEng Mechanical Engineering in 2016 and now I am studying in the field of Psychology, researching how haptic devices can be used to accelerate motor learning.

My field of research concerns how haptics can improve the process of developing motor skills in novel environments, particularly in training of high precision skills needed in surgery and dentistry in virtual reality simulators.

∴ EDUCATION

UNIVERSITY OF LEEDS, SCHOOL OF MECHANICAL ENGINEERING   **2012 - 2016**
MEng Mechanical Engineering

Result: 1st class honours

YEAR 3 INDIVIDUAL PROJECT – Designed and tested a cheaper method of measuring forces in the university's robotic rehabilitation device (iPAM).

YEAR 4 TEAM PROJECT – Designed and developed a robotic testing solution for rehabilitation robotic devices, which allows for long term stress testing, benchmarking, and measurement systems testing. Our project placed 1st in National Instruments Student Competition 2016, and we presented the devices on the company's keynote and in the expo hall.

∴ WORK EXPERIENCE

RESEARCH INTERN – UNIVERSITY OF LEEDS   **JUNE 2014 – AUGUST 2014**

In the summer of my second year I took part in a research project as part of a collaboration between the School of Mechanical Engineering and Psychology at Leeds. It entailed researching how the use of virtual 'force fields' created using a haptic feedback device could influence the learning rate of skilled hand/arm movements. I was required to gather participants and run experiments, and write code that would interface with existing low-level code controlling the hardware of the HapticMaster device being used. The aim was to allow researchers to set up experiments through a user friendly UI with custom parameters.

R&D ENGINEER – KEY ENGINEERING SOLUTIONS   **JUNE 2015 – SEPTEMBER 2016**

In this project I was responsible for designing a prototype control system for an automated milk feeder. I had to research and construct the appropriate hardware, install an operating system and write the controller software from top to bottom. The final system includes a Linux powered PC with a 7" touch screen.

During my time at Key I also worked with digital signal processing, and artificial neural networks in time-series feature classification.

∴ TECHNICAL SKILLS

PROGRAMMING:
- Lots of experience in LabVIEW, MATLAB, Python.
- Experience with R, C#, SQL, HTML, CSS, Processing, and some PHP & JavaScript.

TECHNICAL:
- Experience using and implementing forward/inverse kinematic methods
- Excellent mathematics skills, including 3D maths, linear algebra, matrix transformations, calculus
- Knowledge and interest in multidimensional design optimisation algorithms
- Understanding of control theory including the implementation/tuning of PID controllers
- Worked with and programmed on real-time OSs and FPGAs in robotics applications
- Experience in DSP, filtering, analysing and comparing signals
- Very familiar with a wide variety of technical software across industries. (Adobe Photoshop, Adobe After Effects, Unity3D, Solidworks, Unity3D, Microsoft Office suite, and more)
- Fluency in most operating systems and knowledge of their ecosystems and their functionality (Windows, Linux Distros, Mac OS, Android, iOS)
- Advanced understanding of modifying, fixing and assembling computer hardware.
- Developing knowledge of experimental psychology
- Understanding of electronics allowing for construction of basic circuits and integrating sensors and actuators.

∴ HOBBIES/INTERESTS

- **WEB DESIGN** – I have previously designed and built blogging websites from scratch.
- **GRAPHIC DESIGN** – I have made logos, leaflets and posters for personal use and also for LUUMechEng Society, LUU Veg Society and my Sixth Form. I made the University of Leeds Snapchat "Geofilter" that is currently in use.
- **COMPUTER PROGRAMMING** – I have built and released a few small programs/scripts via my website.
- **PC HARDWARE** – I am very interested in building, modifying and fixing computers and other gadgets.
- **SCIENCE & TECHNOLOGY** – I am a passionate follower in new developments in Science, Technology and Engineering. I follow new computer hardware and mobile phone releases almost religiously. I have a particular interest in virtual & augmented reality and emerging technologies in this field.
- **EDUCATION** – I have previously visited my secondary school as an assistant. Specifically, I helped in A Level Maths revision sessions and gave advice to students who wanted to study Engineering and Science subjects.
- **BLOGGING** – Formerly a blogger for The Gryphon (newspaper/news website)

∴ KEY EMPLOYABILITY SKILLS

- **TEAM WORKING** - experience comes from being a part of and leading many university group projects.
- **PROBLEM SOLVING** – evident by my maths and programming skills.
- **SELF MOTIVATION** – taught myself how to use many different software packages and programming languages.
- **PRESENTATION SKILLS** – Presented in front of 1000s of people at NIWeek Keynote, for example
- **APPLICATION OF NUMERACY –** Developed though University, study of A Levels in Sciences and personal projects in motion graphics, special effects, programming, etc.
